TextArea Page Element:

The TextArea MyPage element is great for efficient processing of text that does not require advanced formatting. It offers basic control over leading and paragraph spacing and include text continuation functionality. If all the text does not fit within the

TextArea Overflow Text:

bounds of the TextArea the HasOverflowText method will return a true value. The GetOverFlowText method can then be called to create a new TextArea with the remaining text. This functionality makes it simple to span large amounts
